

2015 McGlenn Mission Year End Report

I have listed the highlights of our ministry for the 2015 in an outline form. Our ministry verse for the year was Eph. 6:13 and to uncover the “Mystery of the Gospel” to those we teach. It has been useful to keep our eyes on that goal and will continue to be our emphasis this year. We appreciate all you who have supported us financially and in prayer. Some of you that this letter goes to have given one time gifts and that is always helpful. Because of these gifts, we have been able to provide scholarships to some families to come to the classes or museum who otherwise could not because of

financial difficulties. Thank you all for your help.

January

Skywatch - We had a Stonehenge model in the parking lot and “The heavens Declare the Glory of God” Talk. We had a good turnout. People were excited to see God’s Handy work in the planets and stars.

February

At Benji’s Church two blocks away I did 4 Sunday School talks on “Bill Nye the Science Guy, does he really know science?” I show how what he teaches is not supported by true science. Many of the kids in the SS (Picture at rt) go to public school and there they were shown Nye’s videos. Many said these classes helped them see how Nye was wrong and the Bible true.

March

We had several small groups to the museum.

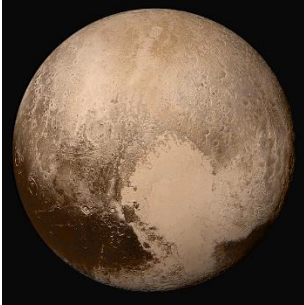

April

We put on several classes at Valley Christian Academy (VCA) called Electric Safari. We had over 50 adults and students at the Santa Barbara Zoo. Many were glad to hear a biblical interpretation of the animals and how they fit into God’s Kingdom and the Bible. We had a Supporters Open House for about 20 folks who had pledged support to the museum for the last 5 years that we have been in the Hardy Diagnostics Warehouse Building.

May

Whisper Canyon 4 day camp. This one Tricia and I organized with the help of several homeschool parents. We had a hike to a fossil outcrop below the camp in the canyon and made cement lawn ornaments such as dinosaurs verse stepping stones. The highlight was the Dinosaur Trail where I had 10 stations with dinosaurs and explanations as to how they show

God's Handiwork. The campers received a 20-page book explaining all the trail stations. We are hoping to see if a local church would let us build a dinosaur trail on their property where we could use the dinosaurs to bring groups to show God's Handiwork. Pray doors would open for that and for money to build it.

At the museum, the Inventor's Workshop exhibit was ready for showing.

Pluto - The biggest news of the year I had been waiting to hear about for nine years was the data from the Pluto probe. In 2006, I predicted that when the Pluto probe data came back in 2015, scientist would say "We have to revise our whole theory of how this planet was formed." Which is in essence what they said.

I am not a prophet, but I based my prediction on the fact that the evolutionary Big Bang Nebular Dust Cloud Story is wrong and so their predictions will be wrong about planet formation. Conclusion: 1. The Raw data was a surprise to the scientists. 2. Pluto has many surprises that do not fit the Big Bang Nebular Dust Cloud "Story." 3. Watch the reports over the next months as they take the raw data and manipulate it to fit the "Story" of the big bang.

June

One VCA class came for an Egypt/Hebrew, Mummy & Egypt Archeology Dig class.

Russ spoke to Cornerstone Church of the Nazarene Senior group.

Day Camp - June 29-July 3 - We did an Inventor's Workshop with our daughter Heather at her home town near Salinas CA. We had 28 students. I brought old radios, computers and other exhibits to show, plus the kids build Lego inventions.

August

We helped Heather move to Bend Oregon.

We had a homeschool group from Bend OR of about 50 do an Adventure Safari with us at a volcano near Bend. I had a 30-page handbook that interpreted the geology of Oregon from a Noah's Flood view point. It was well received and we hope to do more Safaris there when we visit our daughter Heather and son Kevin and their families.

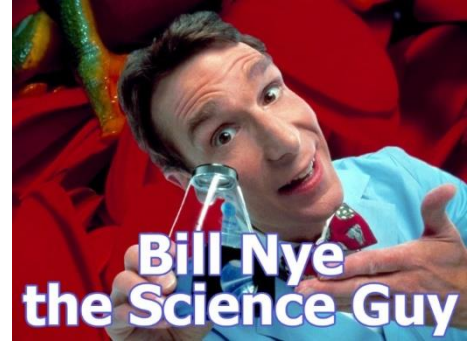

Mono Lake and Yosemite Park Safari – On the way back from Oregon we spent a day at Mono Lake and Yosemite. We wanted to see if we could do a 3 day Adventure Safari there as a family camp. There were many amazing geological formations that showed the results of Noah's Flood. We hope to take a group there sometime.

VCA school came and had a Noah's Ark and Dino Dig.

John Maxfield leader of the First Baptist Church Seniors brought them to the museum for a tour.

September

We were in Minnesota for the month teaching homeschool. We also gave a talk at Twin Cities Creation Science Association meeting on "Bill Nye the science Guy, does he really know science?" I had 10 statements he has made and showed how they are not supported by true science.

October

A big highlight and help was Esther DeVries and her kids came and spent about 2 hours dusting exhibits at the museum. Plus Esther is working on our Facebook site which is a big help, too.

Beowulf - We had a special Beowulf Class asked for by some parents for their students who are studying the Beowulf Saga. I showed his weapons and how some of the creatures he killed were dinosaurs and a Pterosaur (Which injured Beowulf and he dies from the wounds.)

November

First Baptist Seniors came to the inventor's Workshop Exhibit. We had a table of old tools and farm things with some 100 years old. Tricia had the idea to give prizes for some of the activities. They were given a list to match to the antique tools. We gave a prize for the one with the most correct answers and a drawing for a door prize. They really enjoyed the contest and prizes. We also highlighted Samuel Morse who gave us the first computer language (electrical impulses on or off representing a code) He was a Christian and always gave God the glory for his invention that tied the world together with the telegraph.

Coupons. Rose Schaefer has been advising me on promoting the museum. She gave me the idea of giving out coupons for free admission for games won, someone who brings a new visitor and other uses to encourage people to come.

December

I had two tours in December on a Wed & Sat. for the Inventor's Workshop. It was a small turn out but each family brought someone new based on our coupons. That was rewarding.

Juvenile Justice Center

Several of the students have asked us to do premarital counselling. One of the Students also has been counselling other girls using many of the principles that Tricia had taught her. That was a real encouragement to us. We continue to have Bible studies at JJC. I tried an experiment and showed a movie about Joseph. He was betrayed by his own family, then by

Potiphar's wife, then put in jail. He is finally exalted to become the second most powerful ruler in Egypt. There were many parts that were similar to what the JJC kids have gone through and touched their spirits.

Russ's Writings – Pray we can get more of these out to folks.

The Mystery of the Indian Effigy Mounds and Petroglyphs - I self-published this revised book which is on Amazon.com. You can order it there to download to your computer or Kindle pad. If you have a Kindle please buy the book, let me know you bought it & I will refund one have your money as a gift to anyone who buys it.

Icecap. I had written many stories and short stories in 1980 and one is now published at Amazon.com. It's called "Icecap" and is a science fiction space story.

Hand Books now available:

The Zoo Handbook - This is up to 40 pages. It is useful at any Zoo and shows God's Handiwork in the animal kingdom. I hope to continue to expand it and place it on Amazon also.

Giants in the Earth Gen.6:4 The Dinosaur & Science Museum Handbook – Also 40 pages it is useful at science museums to show God's handiwork in geology, dinosaurs and other topics.

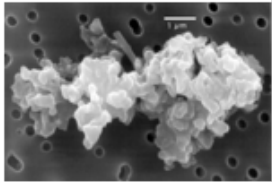

Natural History Handbook – About 30 pages. Natural History used to mean the history of nature and how it shows God's Handy work. That is what the booklet does and we use it on our nature hikes of which we had two this year. One on the beach and one in the mountains.

Science Question of the Day Book – This is a 40 page book with mathematical formulas that show God's Handiwork.

4. Newton's Law of Gravity

How does Newton's Law of Gravity or Attractive Force (F) between two objects, show that microscopic particles in space (dust motes in the photo below) are not attracted together to form stars or planets?

$$F = \frac{m_1 m_2}{d^2}$$

F = Force
m = mass of object
d = distance between objects (sometimes r radius is used) 4

(Example Left) A friend and Engineer, John Sterkin, had the idea for this and we have worked together to make it work. There are a series of cards one can cut out and leave on their desk for others in the office to see and ask about. We thought they might have a discussion at lunch time as engineers work with many of the formulas all the time. They start out this way: "How does this formula show that... *the Big Bang could not make stars, or the Earth is young, or stars cannot form from nebulas or there is no life in outer space?* For example: Newton's First Law of Motion $F = ma$ (Force = mass times acceleration) can be used to show that the Big Bang Theory does not work to explain the creation of the universe from nothing. (I call it The Big Bang Story because it does not follow Newton's 3 Laws of Motion. If it cannot be proven mathematically then it is not a valid theory but just a story)

I hope someday to combine these all into one or two Handbooks that will be general enough for people to use when they go on safaris.

Again we thank you all for your financial and prayer support. It has helped us to teach God's ways. God Bless your New Year.

In Him, Russ and Tricia. E mail russmoglenn@juno.com Adventure Safaris Facebook
