

Classes. This is a general outline for all age levels. The program contains 16 lessons, goals, verses, attributes of God, games, activities and vocabulary. You need to bring a flash stick to class to transfer to your computer lessons 1 - 16 of over 2000 pages of written explanations and colorful illustrations. The tuition fee is used to pay for the lesson development, hands-on models, worksheets, and scientific instruments. We have 4 lessons per day with a 30-minute Power Point slide presentation then a 30 mn. hands on activity or game.

Some parents have expressed a desire for more outside class work. Your flash stick will contain all of the above plus worksheets, vocabulary, quizzes, and articles that cannot be covered in class. When using the flash stick materials, you are encouraged to ask Mr. McGlenn questions on in-depth subjects via e-mail, phone, letter, or after class if there is time.

Goal. "They (heaven and earth) continue this day according to thy ordinances (laws) for all are thy servants." Ps. 119:91. This year's goal is to show that the scientific Laws of the universe (God's ordinances) were created to serve God. One purpose of science is to understand these laws so we can better human life and serve God. (Prov. 1:7)

Attributes of God. Based on Ps. 119:91 and the goal above, I will be adding to each lesson an attribute of God that the ordinance (law) teaches. (Photo -Pluto at left)
