Stardust

Tuesday, July 20, 1999, 7:30 p.m. Totino Fine Arts Center, Rm. 115, Northwestern College, Roseville

STARDUST is the space mission that will fly close to a comet and, for the first time ever, bring cometary material back to Earth for analysis by scientists worldwide.

Launched in February 1999, *STARDUST* will be the first U.S. mission dedicated solely to a comet and the first robotic return of extraterrestrial material from outside the orbit of the Moon. Its primary goal is to collect comet dust and volatile samples during a planned close encounter with comet Wild 2 in January of 2004. Additionally, the *STARDUST* spacecraft will also bring back samples of interstellar dust including the recently discovered dust streaming into the solar system from the direction of Sagittarius.

Dee McLellan was one of twenty-six *STARDUST* Educator Fellows who converged on Kennedy Space Flight Center, Fla. in February to view the lift-off of *STARDUST*. The Educator Fellows were chosen from extensive networks of classroom teachers, curriculum specialists, and museum/science center educators.

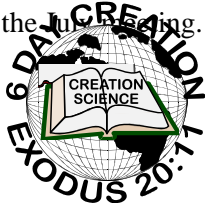

Dee will be speaking about the *STARDUST* mission. The big highlight of the evening, however, will be a sneak preview of a comet chapter that will be published later this year in Walt Brown's seventh edition of his popular book, *In the Beginning*. *In the Beginning: Compelling Evidence for Creation and the Flood*, takes a different look at a currently hot topic. Ideas that could revolutionize our understandings of the beginnings of time and subsequent events are carefully explained. You will be challenged to consider fresh ideas in this age-old debate.

TCCSA Logo Contest

Do you have a better idea? Think you can design a logo for TCCSA that will catch the eye and tell our story? We think it's time to change our image, will you help? Keep it simple so it will be recognizable large or small.

WHY DO WE NEED A NEW OR MODIFIED LOGO?

The central part of the present logo, the world and the Bible with the words Creation Science, are OK, but the outer portion of orbit paths which make the whole logo an approximation to a Bohr atom model, are not in agreement with current scientific evidence for atomic structure. Here are some ideas to get you started. Entry deadline is Aug. 15 so we can print samples in the Sept. newsletter. Use the address in the box below for questions or submissions. You may mail or hand deliver to the July meeting.

August - No meeting or newsletter.

Sept. 21 - Start of new season with something for everyone.

Professor Albert Fleishman, professor of Comparative Anatomy of Earlangen University said: "The theory of evolution suffers from grave defects, which are becoming more and more apparent as time advanced. It can no longer square with practical scientific knowledge, nor does it suffice for our theoretical grasp of the facts. The Darwinian theory of descent has not a single fact to confirm it in the realm of nature. It is not the result of scientific research, but purely the product of imagination."

Fleishman, Albert, VICTORIA INSTITUTE, Vol. 65, pp 194,195.

If you know someone who may want this mailing let us know that too.**

CREATIONWISE

WOW, SCIENTISTS SAY THEY
HAVE A ROCK THAT MAY BE
EVIDENCE OF LIFE ON MARS!!!!

THIS COULD SHOW US THAT LIFE ON EARTH
MAY NOT BE AS SPECIAL AS WE'VE BEEN
LED TO BELIEVE. HUMAN LIFE, ANIMAL
LIFE, PLANT LIFE, MARTIAN LIFE... ALL
JUST PART OF
BILLIONS OF
ACCIDENTS
THROUGHOUT
THE UNIVERSE!!

AND THIS IS A
GOOD THING?

Adventure Safaris

Please pray for our activities this summer, for safe travel for all participants and a God honoring experience for everyone. You may still be able to sign up for one of our safaris, but you must call soon.

We are running 5-day camps at a site near Belle Fourche, SD, an hour drive from Rapid City. Russ reports they are finding some very large bones, but without a head yet he is not sure what it is. Camp sites, motels and even a bed & breakfast are available in the area. In addition to digging, there are many free-time activities for the whole family. A training manual will be provided prior to the digs so you can develop dig skills at home before you go.

Sailing trip on Lake Manitoba in Canada, August 8-21 in search of Monopogo. Monopogo is a supposedly extinct basilosaurus dinosaur that has been sighted for the past 40-50 years usually in August. We will be sailing, exploring, hearing legends and much more.
