Honey Bees

7:30 PM, March 21, 2006, Nazareth Chapel, Northwestern College

The amazing honeybees get more amazing all the time. They give directions by dancing and exchange chemical messages. Could their complex behavior, metabolism and social structure be the result of mutations and natural selection? Don't count on it.

John Nuckols is an extraordinary teacher who presents science in a way that kids love and really learn. John has over 800 students annually and they return year after year to his classes. We too invite John back every year for a fact-filled, interesting talk that everyone enjoys. And best of all, John presents the Creator as well as the creation. Bring the whole family for a fun learning experience.

See his web site www.ecreationscience.com

All meetings are free and open to the public. A free-will offering will be accepted.

Coming Up . .

April 18 - Brian Young - Creation Philosophy in Evangelism

May 16 - Jill Whitlock - Noah, Dinosaurs & The Flood

June 20 - Stay tuned for a good one

Life's Obstacles: Roadblocks or Stepping Stones?

Dick Beardsley holds the 4th fastest U.S. men's marathon time in history. Dick is a dynamic Christian speaker with an extraordinary life story that every young person should hear. He will be at the Albert Lea High Auditorium on Wednesday evening, April 5th.

Squirrel tail

Consider just a few of the uses for the tail of a squirrel.

1. How does a squirrel stay balanced on a tree branch? He uses his tail like a tight rope walker uses a poll. Tilting his tail one way or the other as the center of gravity changes as he moves along the branch.
2. When a squirrel is eating note how he curls the tail over his head. If a hawk decides to have him for lunch, all his claws will grab his fluffy tail.
3. Or notice the tail when he sleep, He wraps it around his body. He carries his own portable sleeping bag.

Did this tail happen by chance or did the Creator design it that way. If the tail were not there, the squirrel would lack balance, would not have protection from flying predators, or would not easily withstand cold temperatures. So the next time you see a squirrel, stop and consider his tail.

.... stop and consider God's wonders. Job 37:14

Darwin's Mom triggers another ideal

Important Activities

We observed our 10th annual Science Fair at Har Mar Mall in Roseville on February 18-19. Each year we learn new things from students who are a real credit to themselves, their parents and TCCSA. A special thanks to the Von Vett's and their team for another successful science fair. Check out the pictures on our web site.

Coming up next is our second annual writing contest for all students through grade twelve. Our aim is to encourage young people to investigate some form of science and then clearly write about it. Entrants have until March 15 to complete and file their papers. Authors of winning papers may be asked to read their report at a monthly meeting.

Go to www.tccsa.tc for rules and information.

Dr. Henry Morris

Dr. Henry Morris, founder and president emeritus of the Institute for Creation Research and the "father" of the modern creationist movement (especially with *The Genesis Flood*, which he co-authored in the early 1960s) had in recent days suffered a series of debilitating small strokes, and passed into the presence of his Creator and Savior, Jesus Christ on February 25.

Dr. Morris, 87, had been receiving care in a San Diego area convalescent hospital. According to his son, Dr. Henry Morris III (Executive Vice President of the Institute for Creation Research), the elder Dr. Morris "remained cogent and alert up until the last few moments. My brother John (President of ICR), my sister Mary, and my sister Rebecca were with him just prior to his passing."

Please pray for the family, the staff of the Institute for Creation Research, and for all those whose lives continue to be changed by the many books and articles authored by this great
