

## Explosive Evidence for Creation: Mount St. Helens

7:30 PM, February 20, 2007, Totino Fine Arts Center, Room 116, Northwestern College

Geology and the assumption of an ancient age for the earth have been used as a wedge to cast doubt on God's Word for over 200 years. Many believe Mt. St. Helens was God's wake-up call to the geological and compromising Christian communities. This highly visual presentation shows the results of the type of earth reshaping forces which were happening during and subsequent to the worldwide flood. Although the significance of Mt. St. Helens is well known to creationists, the majority of Christians do not have a clue how powerfully this event shatters the assumptions of evolution. If you know pastors, Christian friends, or non-believers who do not comprehend the significance of creation to Christianity, this is an unforgettable presentation you WILL want to encourage them to attend.

Bruce Malone is an ambassador speaker for the Institute for Creation Research with 25 years experience as a research leader at Dow Chemical. This will be the third consecutive year he has brought highly visual and engaging presentations to TCCSA.

All meetings are free and open to the public. A free-will offering will be accepted.

### Coming Up . . .

For updates go to [www.tccsa.tc](http://www.tccsa.tc)

February 17-18—Science Fair at Har Mar Mall see web site for details

March 20—Ian Taylor - Could Evolution produce A Genius?

April 17—Dr. John Baumgardner - From the Institute for Creation Research

Have you considered ...

... the rivers in the sea? One of them, the Gulf Stream, carries 5,000 times as much water as the Mississippi River. We know that the warmth of this river keeps Great Britain from having unbearably frigid winters. Steady winds from east to west and the spinning of the Earth cause these waters to be set in motion and continue their circulatory path. There are many rivers in the sea; if they did not exist, the oceans would stagnate and become filled with death and decay. According to Jonathan Weiner in the book, *Planet Earth*, without circulation, "noxious fumes would slowly gather near the floor and kill all the bottom dwelling creatures. Slowly the Earth's own body heat would warm this foul black water until it was hotter than the water on the surface. The unstable ocean would eventually turn over and vent the whole mess to the surface, with catastrophic effects on fauna and

flora, poisoning the atmosphere." Our life on Earth depends on these rivers in the sea. God set them in motion for our benefit.

... stop and consider God's wonders. Job 37:14  
*It Couldn't Just Happen* by Lawrence Richards p.27-29.

### Calling all K-12 Students

Have you participated in a science fair? They can be a fun and exciting way to learn science.

You select a topic, design a project, complete the project, design a display and make it. You are judged on your project and your verbal and visual presentation of it. Your project will be on display in a public mall for 2 days.

Go to [www.tccsa.tc](http://www.tccsa.tc) and click on Science Fair for rules, ideas, helps and an application form. You can also contact Julie Von Vett at (651) 464-4361 or email her at [vonvett@juno.com](mailto:vonvett@juno.com).
