

## Oil Is A Renewable Resource

Tuesday September 19, 2023, 7:00 PM, Univ. of Northwestern, Totino Fine Arts Center, Room F2106

Oil wells in the Gulf of Mexico are being refilled with oil coming up from below the current oil fields. Russia has drilled over 300 eight-mile deep wells into the Earth's granite crust. This has worked so well that they worked in Vietnam and found oil off its coast where everyone said there was no oil. Oil used to be found in sedimentary rock at 2-3 miles deep, but the Russians found a new source. What is happening? There are two basic theories on the way oil is made. The number one theory for the last 150 years is the Biotic Theory or the plant/animal theory. The second theory is called the Abiotic Theory and it means no plants. Russ McGlenn will show scientific data on both and let you decide which to believe. When running for president Al Gore said in 2000 that by 2018 oil production would peak (Called Peak Oil) From then we would run out of oil in the next few year. Are we running out of oil? Come and see what the data says.

Russ McGlenn has researched the topic for years and will present his findings.

Updates at [www.tccsa.tc](http://www.tccsa.tc) All meetings free and open to the public.

### Have you considered ...

... What an awesome God we have. What! I can't believe it; male mice can pass on the fear of cherry blossom smell and more smell receptors to pick up that smell! For 10 days, scientists shocked male mice every time they smelled cherry blossom scent. These mice developed more smell receptors, which allowed them to pick up the blossom scent at lower concentrations. Researchers decided to examine the sperm of these mice and found that the receptor gene for detecting cherry blossom smell was different than the control mice. Now scientists inseminated female mice with the shocked mice's sperm. The result: the baby mice had more odorant receptors AND when they smelled the cherry blossom odor, they became agitated.

DNA within a cell contains genetic information, also there are makers that regulate the DNA which are called epigenetics. This is an additional type of language that overlays the DNA code that control how genes are switched on and off. Sensor's pick up what is happening in the environment -shocks with cherry blossom smell. This information is analysis and now a targeted response is given- more odor receptors to pick-up low-level concentration of cherry blossom scent. This information is then passed on to future generations. Evolution is based on random mutations; this is not random or purposeless. This in an engineered response, which requires an Engineer, and this great Engineer is God.

### TCCSA's STATEMENT OF BELIEF

We believe in God: The Father, Son and Holy Spirit. We believe that the Bible is the inspired Word of God, and that all of its assertions are historically and scientifically true in the original autographs; this means that the account of origins in Genesis is a factual presentation of actual historical truths. We believe that the origin of matter and all basic types of living things, including man, came about through direct creative acts of God during the six-day creation week described in Genesis. Whatever biological changes have occurred since the creation week have accomplished only changes within the created kinds. We believe that the great flood described in Genesis, commonly referred to as the Noachian Flood, was an historic event, world-wide in extent and effect. We accept the account of the special creation of Adam and Eve as the first man and woman. Their subsequent fall into sin, by disobedience of God's direct command, is the basis for our belief in the necessity of a Savior for all mankind. Therefore, we believe that Jesus Christ is our Lord and only Savior and that personal faith in Him is necessary for salvation.

### From the mailbox

I received a letter from Ruth Blair. She is 96 years young and signed up for our newsletters in July 1996. She is unable to attend our meetings now but reads the newsletters to keep up to date with us. She has requested a DVD of the early Chinese written language showing they knew about **our Creator God and the flood of Noah's day**. TCCSA had a talk about that in 2017 and we will get a copy out to her right away.

Ruth likes to "write poetry about God, His creation and existence." one of her poems is in the box to the right of this one. We may have more examples in future issues.

### The Heavens Declare

By Ruth Blair

As we look to the heavens what do we behold,  
The beauty of His creation as it was told.  
The sun and the moon as they hang in the sky,  
**They tell the story to every man's eye.**  
They light up the sky for you and for me,  
And keep the whole world from darkness you see.  
Come let us worship our Creator above,  
Give all our praise to Him, and our love.

Thank you, Ruth, for sharing with us some of your skill with words. God bless you.
