

Blind to the Obvious

This presentation will include an example of:

1. How science works and how bad assumptions lead to faulty conclusions – is evolution faith based?
2. Design in nature and why commonly assumed mechanisms do not work
3. Food/nutrition misinterpretation that causes many health problems
4. Several fascinating examples of how all of us can be blinded to the obvious truth when we are told something over and over again

Why can't people see the obvious?
Why are there so many data misinterpretations?
We often see reports, "Scientists were surprised..."
