What better field trip than to the Galápagos Islands! Every secular science textbook hails Darwin with god-like status, ascribing to him the answers about the origin of life. Lance and Penney Davis' trip to the Galápagos Islands with their students and Dr. Georgia Purdom of Answers in Genesis, gave them the opportunity to highlight the magnificence of God's fingerprint in every location where Darwin turned his back on the Creator. It was indeed, the trip of a lifetime.

Journey to The Galápagos also highlights the scientific evidence confirming the biblical account of creation and the flood in Genesis as explained by Dr. Georgia Purdom, who brings to bear her expertise in genetics. She draws on her extensive knowledge to explain in layman's terms that "molecules-to-man" evolution is not taking place on these islands. You will enjoy the refreshing biblical perspective as it strengthens your faith with answers! *Great for kids age 12 + up!*

This Month's Feature:

JOURNEY TO THE GALÁPAGOS THE TRIP OF A LIFETIME!
