## How Did Noah Build the Ark?

Nazareth Hall, Chapel, University  
of Northwestern - St. Paul,  
3003 North Snelling,  
Roseville, MN

With Noah's pre-Flood intelligence, his focus on the purpose God assigned for his life, and communication with the Creator Himself, he was able to complete the construction of the Ark from the basic instructions we find in Scripture. There is evidence that ships approaching the size of the Ark have in fact existed in ancient times. The ancient Greeks built a ship named Syracusia (or Alexandris) that carried around 4,000 tons of cargo. The pre-modern Chinese also built giant wooden ships. The 15th-century sea-going junks of the ambassador Cheng Ho approached the size of the Ark (John Woodmorappe, "Noah's Ark Feasibility Study," Dallas, TX: Institute for Creation Research, p. 50).
