Bio-mimicry is a rapidly growing discipline at all major universities. From drug companies looking within plants and animals for unique new drugs...to designs from nature which have led to major human inventions - this talk takes a tour of human advancements which have resulted from observing creation. This is a wonderful celebration of what God has provided for humanity through his creation and will be enjoyed by all ages. The talk ends by exposing the fallacy of attributing these designs from nature to random evolutionary processes rather than acknowledging our Creator as the true designer.
