The world of geology has been dominated by an exclusive secular view of earth history for the last 200 years. This is a strange position to be in, as earth history as it is taught in our schools today is really not science at all, but a philosophical opinion about earth history. It stubbornly refuses to allow any other interpretation of earth history. The Secular Geology of Minnesota is no exception. Was there an ice age in Minnesota? Is the geologic history of Minnesota really billions of years old? How would Genesis explain the rocks and other geological phenomena? We will take a different look at a few aspects of the geology of Minnesota from a Biblical perspective and try to unravel some of the big geologic questions about your fascinating state.
