One of the biggest debates in evangelical Christianity today is whether or not Adam and Eve were real people. Sadly many Christian theologians and scientists believe that genetics has disproven the existence of an original couple specially created by God. In addition to accommodate a non-literal Adam and Eve, many have begun to redefine sin and salvation. In this presentation we will explore both the theological importance of Adam and Eve to the gospel and how the science of genetics supports and is consistent with the fact that all humans have descended from an original couple created by God as described in Genesis.
