A Flood, an Ice Age, and Climate Change

Tuesday May 21 2024, 7:00 PM, Univ. of Northwestern, Totino Fine Arts Center, Room F2106

Helmut Welke is no stranger to TCCSA having presented several programs over the past few years. Since he last talked he moved from Iowa to Tennessee but he hasn't yet learned how to talk southern.

In this presentation you will learn how the ice age is a natural result of the Flood, and how the Biblical model solves a host of mysteries about the onset of an ice age but also woolly mammoths and migration patterns. We'll look at evidence for one ice age as well as what to make of the modern claims for 'climate change'. Helmut always does his home-work and will cover many aspects of the flood and the ramifications that still effect our planet today. For All ages

Updates at www.tccsa.tc All meetings free and open to the public.

Have you considered ...

...A hummingbird's tongue?

The humming bird does not suck up nectar using its beak as a straw. Instead, the long, thin tongue, which extends way beyond the bill, laps up the small pool of nectar. At the same time, nectar is collected through capillary action along side channels of the tongue. When the tongue is drawn back into the mouth, the nectar is squeezed from the channel recesses and then swallowed.

Where is this long tongue stored? The tongue—like the woodpecker's tongue—splits at the floor of the mouth; then the two forks wrap under the jaw and around the head and are fastened in the front of the bird's skull—all this happens under its skin. The tongue and the bill would be useless if the hummingbird could not hover. Conversely, there would be no need for the bird to hover if it did not have the long bill and tongue. The tongue, the bill, and the ability to hover had to be there from the beginning. Also, notice the size of the bird—if it were larger, it would take more energy for it to hover. Where would it obtain all the nectar too power that size body? The Master Designer set it up correctly from the very beginning.

So buy a hummingbird feeder; boil 4 parts water to 1 part sugar, cool and place in feeder. When visitors come.... have them consider the hummingbird's tongue.

Coming Up (Lord Willing)

June 18—Don Slinger—God's Pharmacy

July 16—Dr. Kezele—From Darwin to Dictatorship

Aug. 20—Kevin Lea—DART Prediction & NASA's Blunder

Sep. 17—TBD.

TCCSA's STATEMENT OF BELIEF

We believe in God: The Father, Son and Holy Spirit. We believe that the Bible is the inspired Word of God, and that all of its assertions are historically and scientifically true in the original autographs; this means that the account of origins in Genesis is a factual presentation of actual historical truths. We believe that the origin of matter and all basic types of living things, including man, came about through direct creative acts of God during the six-day creation week described in Genesis. Whatever biological changes have occurred since the creation week have accomplished only changes within the created kinds. We believe that the great flood described in Genesis, commonly referred to as the Noachian Flood, was an historic event, world-wide in extent and effect. We accept the account of the special creation of Adam and Eve as the first man and woman. Their subsequent fall into sin, by disobedience of God's direct command, is the basis for our belief in the necessity of a Savior for all mankind. Therefore, we believe that Jesus Christ is our Lord and only Savior and that personal faith in Him is necessary for salvation.

In the Minnesota Museum of Mining in Chisholm, MN, visitors are surprised to see a sign next to stone candlesticks which reads, "*petrified candles.*" These rock candlesticks were found in an underground mine. **How could wax candles become petrified in such a short period of time?** Up until World War II, most mines were dug via underground tunnels. Miners were given a weekly ration of 5-6 candlesticks. They would attach one to their helmet and stash others in openings in the mine walls. Many of these underground mines were wet and had to be constantly pumped out. After World War II, the underground mines were closed; pumps were turned off and many of the mines flooded with water. With the need for iron increasing, open pit mining became popular. As the miners were digging these open pits, they would come across the old drifts and shafts which contained forgotten mining items. Candlesticks were one such item. Some of the candlesticks were found to be petrified.

How did they become petrified? Mineralized waters saturated the soft wax candles turning them into rocks. Does it take millions of years to petrify as commonly believed? No - just the right conditions.
